

TESTING METHOD INSTRUCTIONAL GUIDE

TEST NO. 1

TWO HOSE DOUBLE CHECK VALVE ASSEMBLY

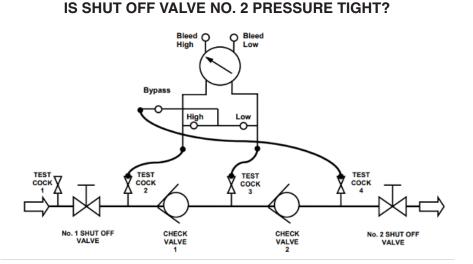

IMPORTANT NOTE:

It is the tester's responsibility to determine if this procedure is accepted by local authorities.

TEST SET UP:

- 1. Obtain permission to shut off the water supply.
- 2. Determine the direction of flow.
- 3. Identify all 4 test cocks.
- 4. All test kit valves are closed.

- 1. Connect the red hose between test cock 2 and the high side connection on the test kit.
- 2. Connect the blue hose between test cock 3 and the low side connection on the test kit.
- 3. Open test cock 2 and 3.
- 4. Bleed the high side of the test kit.
- 5. Bleed the low side of the test kit.
- 6. Connect the yellow hose to test cock 4. Open test cock 4 to bleed air from the hose. Close test cock 4.
- 7. Connect the yellow hose to the bypass connection on the test kit. Open test cock then close the No. 2 shut off valve.
- 8. The gauge should read a minimum of 1 PSID.
- 9. Open the high and bypass valves.
- 10. Close test cock 2.
- 11. If the gauge reading holds steady, shut off valve No. 2 is recorded as TIGHT (proceed to Test No. 2).
- 12. If the gauge reading drops to zero, shut off valve No. 2 is leaking downstream.
- 13. If the gauge reading increases, shut off valve No. 2 is leaking under back pressure.
- 14. The check valves cannot be tested with this procedure unless a no-flow condition can be achieved through repair or shut off valve No. 2 or additional downstream shut off.

TESTING METHOD INSTRUCTIONAL GUIDE

TEST NO. 2

TWO HOSE DOUBLE CHECK VALVE ASSEMBLY

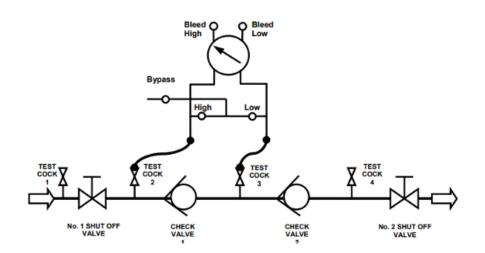

IMPORTANT NOTE:

It is the tester's responsibility to determine if this procedure is accepted by local authorities.

TEST SET UP:

- 1. Obtain permission to shut off the water supply.
- 2. Determine the direction of flow.
- 3. Identify all 4 test cocks.
- 4. All test kit valves are closed.

IS THE STATIC PRESSURE DROP ACROSS CHECK VALVE 1 AT LEAST 1 PSID?

- 1. Close the high control and bypass valves.
- 2. Close test cock 4.
- 3. Disconnect the bypass yellow hose from the test cock 4.
- 4. Open test cock 2.
- 5. Bleed the high side of the test kit.
- 6. Bleed the low side of the test kit.
- 7. Record the gauge reading. If should be 1 PSID or higher.
- 8. Close test cocks 2 and 3.
- 9. Disconnect hoses from test cocks.

TESTING METHOD INSTRUCTIONAL GUIDE

TEST NO. 3

TWO HOSE DOUBLE CHECK VALVE ASSEMBLY

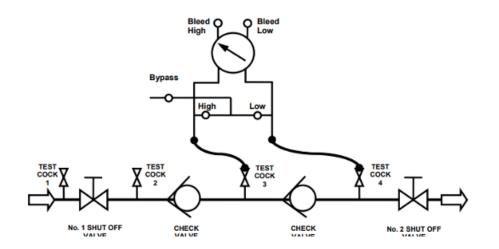

IMPORTANT NOTE:

It is the tester's responsibility to determine if this procedure is accepted by local authorities.

TEST SET UP:

- 1. Obtain permission to shut off the water supply.
- 2. Determine the direction of flow.
- 3. Identify all 4 test cocks.
- 4. All test kit valves are closed.

- 1. Connect high (red) hose to test cock 3.
- 2. Connect low (blue) hose to test cock 4.
- 3. Open test cocks 3 and 4.
- 4. Bleed the high side of the test kit.
- 5. Bleed the low side of the test kit.
- 6. Record the gauge reading. It should be 1 PSID or higher.
- 7. Close all test cocks. Open No. 2 shut off valve. Remove all test equipment.
- 8. DRAIN TEST KIT.
